

Jig & Fixture

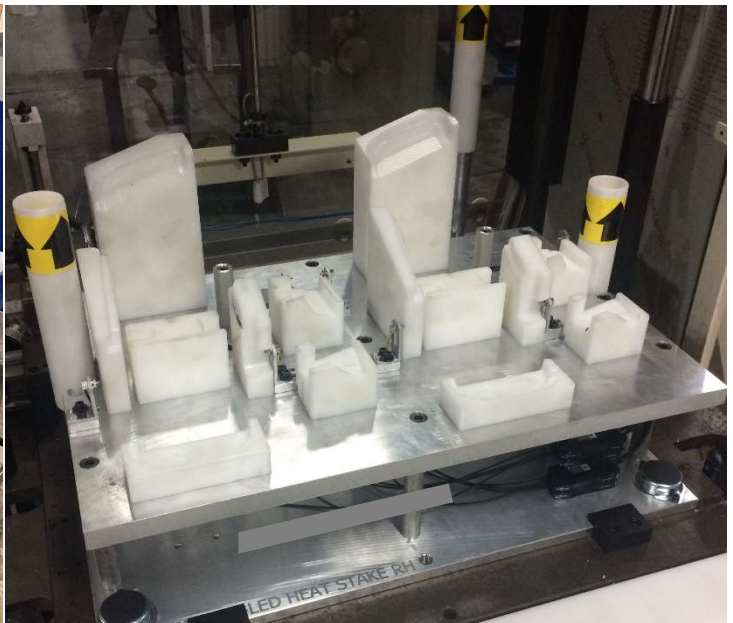

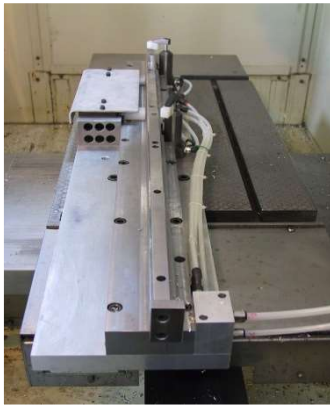

Several of our customers have contracted with us for turnkey packages. They purchase a machine tool and send it to our facility; we design and build a fixture, program and add relays to operate the clamping mechanisms. We run samples for customer approval before it is shipped to their facility.

Machining Fixture manufactured with 4140 Alloy steel to machine aluminum casting, Hydraulic clamping was employed to overcome the machining pressures. A Rotary Union was also used on the hydraulics to allow for free rotation.

- Machining Fixtures
- Assembly Fixtures
- Welding Fixtures
- Drill Jigs
- Check Fixtures
- Gauging Fixtures
