Our tool and die makers are among the most highly skilled workers in manufacturing. Our toolmakers craft precision tools and machine prototypes, often working with engineers and designers, determining how best to manufacture the part. In addition to developing, designing, and producing new tooling, these workers produce the jigs, fixtures, and special holding devices that enable us to machine the variety of parts we produce daily.

Parallel a company INLINE with your needs

Carbide Dies

Small Dies

Large Dies

Compound Dies

Progressive Dies

Trim Dies

Parallel Tool & Die, Inc. has over 27 years experience with CARBIDE Dies and Products

Before we work with a specific grade, we first consider the following properties, the Type, Hardness, Density, Porosity rating. With this information we can determine how best to manufacture the parts

The right combination of highly skilled toolmakers and the state-of-the-art equipment allows us to Braze, Wire EDM, Plunge (sinker) EDM, and Grind to the shape, size, and tolerance needed.

The difference is experience!
